NON-TECHNICAL STAFF INTERVIEW RESPONSES (ANONYMIZED)

Participant N1 – Finance Staff

Security awareness is high due to financial risks. Tools like MFA are used, but multiple approvals cause delays. Reporting depends on absence of penalties.

Participant N2 – HR Officer

Employees understand security but do not always follow it. Training impact is limited. There is no reward system for secure behavior.

Participant N3 – General Staff

Security is seen as following IT rules. Tools are used only when required. Training needs to be more practical.

Participant N4 – Employee (General)

Security reminders are occasional. Work pressure sometimes leads to ignoring security practices. Motivation is often fear-based.

Participant N5 – Customer Support Staff

Security procedures are followed when required, but sometimes they slow down customer response times. This creates pressure to find quicker alternatives.

Participant N6 – Administrative Staff

Security rules are sometimes confusing, and employees are not always sure what is expected. More practical guidance and examples would help improve compliance.
