## SURVEY SUMMARY (N = 80 PARTICIPANTS)

**Key Findings:**

- 68% of employees reported bypassing security protocols under workload pressure.
- 57% of non-technical employees found training only partially effective.
- 72% of technical staff consistently used security tools (MFA, VPN, etc.).
- Only 35% of participants reported the use of behavioral KPIs.
- Managers indicated that security culture varies across departments.

**Key Observations:**

- Awareness does not always translate into behavior.
- Workload pressure negatively impacts compliance.
- Behavioral measurement mechanisms are limited.
- Technical controls exist but are not always used effectively.
